EDUCATION

Dartmouth College, Hanover, NH, United States **Nov 2026**
Bachelor of Engineering, Mechanical Engineering **GPA 3.69/4.0**
Relevant Coursework: *Machine Engineering, Embedded Systems, Structural Analysis, Thermodynamics, Fluid Mechanics, Product Design for Manufacturing*

Westminster School, London, UK **Jul 2021**
Results: A-level: A*A*A (Physics, Mathematics, Geography), GCSE: 9A*s

RELEVANT EXPERIENCE

RAL Space, Harwell, United Kingdom **Jun 2025 - Sep 2025**
Spacecraft Dynamics Test Intern

- Ran vibration/shock testing on flight hardware and structural test articles (test setup, operation, data analysis). Supported commissioning operations for new NSTF facility, incl. cleanroom accelerometer placement and data acquisition setup.
- Overhauled and automated Dynamics Group accelerometer calibration and H&S compliance tracking spreadsheets using Excel VBA. My work caught several supplier calibration errors.

Class Projects, Dartmouth College **Sep 2022 – Present**
Modular Aerial Vehicle, ENGS89/90 (Sponsor EOS GmBH)

- Design and SolidWorks modelling of nosecone, empennage, and fuselage and wing part connections.
- Point of contact for our sponsor company, led all meetings and handled communications.

Crane Bot, ENGS076

- Led design, fabrication, testing on gripper module incl. gearbox and linkages. Used SolidWorks, 3D printers and laser cutters for rapid prototype iteration. Created engineering drawings for designed parts.

Truss Bridge, ENGS033

- Iteratively designed and tested a model plywood truss bridge using SolidWorks and SAP2000. Sized members and predicted failure mode and load using FEA tools.

Planetary Ice Research Lab, Dartmouth College **Sep 2024 – Nov 2024**
Coring Bit Fabrication

- Machined new 50cm carbide-tipped ice coring bit. Used lathe, TIG welding, plasma cutter, brazing.

High Altitude Ballooning, Westminster School, London **Apr 2020 - Jul 2021**
Atmospheric Pollutants Research + Reusable Payload Project

- Developed and launched payload with pollutants sensor suite and cameras to 30km altitude. Launches in London and countryside to compare NO₂ concentration altitude profiles. Part of a student team of 4.
 - Worked on payload design using Fusion360. Iterated design during project, balancing weight considerations with impact and waterproofing requirements. Final design survived rough landings.

ADDITIONAL EXPERIENCE

Thayer School of Engineering, Hanover NH **Sep 2026 – Nov 2026**
Teaching Assistant, ENGS076 Machine Engineering

- Give CAD, design, fabrication guidance to students. Grade coursework, hold office hours.

War and Peace Fellowship, Dickey Center for International Understanding, Hanover NH **Aug 2024 - Present**
Fellow

- Selected for competitive fellowship to engage in discussions with senior US policymakers on global security

Irving Institute for Energy and Society, Hanover NH **Jun 2024 - Present**
Building Ambassador Manager

- Manage group of 15 other student workers, handling scheduling and resolving day to day issues

SKILLS & CERTIFICATIONS

Computer: SolidWorks (CSWA certified, CSWP in progress), MATLAB, C
Fabrication/Manufacturing: 3D printing, laser cutting, some carpentry, machining, and welding experience

EXTRACURRICULARS

Dartmouth Heavyweight Rowing Team **Sep 2022 – Jul 2026**

- 20+ hrs/week training year round alongside schoolwork, competed and medaled at US Nationals, received Empacher-IRCA scholar-athlete award 3 years running
